

Webinar

Digital certificates - trusted-easy-anywhere

Digital certificates are urgently needed for protecting your IT infrastructure. The communication with external partners and the use of mobile devices are gaining importance. In order to use encryption, strong authentication or digital signatures you have to distribute and manage digital certificates on all your devices. This has to be done cost-effectively and transparently to the user.

Secardeo and SwissSign will together inform you in the **Webinar** „Digital certificates - trusted-easy-anywhere“ about the following topics

- Where PKI is needed: end-to-end encryption, device authentication and much more
- PKI is „built-in“: systems and standard applications are supporting certificates
- PKI challenges: transparent to users, automation, costs
- Internal Windows PKI vs. managed PKI
- Automated key distribution for Windows and mobile devices

Please reserve your time for this

on **20. April 2016** from **9:00** until **9:30 CET** (in **German**)

on **20. April 2016** from **17:00** until **17:30 CET** – (15:00-15:30 UTC/GMT in **English**)

For your registration please send us an E-Mail with the subject **“PKI Webinar”** to:
