Secardeo to Showcase End-to-End Encryption and Automated Certificate Management at it-sa 2019

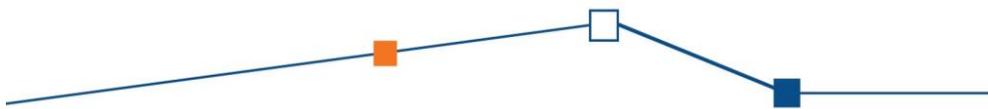

Several DAX companies, global players from all over the world as well as many European medium and large enterprises trust Secardeo for their Certificate Management

Ismaning, 22 August 2019 - Secardeo GmbH, a leading provider of Certificate Management and PKI Automation solutions, will showcase its TOPKI platform at it-sa, hall 9, stand 9-645. Using the TOPKI platform, companies cannot only distribute keys and certificates in an automated, secure and trustworthy manner, the platform can also fulfil all of the required tasks to achieve seamless end-to-end encryption of all email communications.

A prerequisite for any successful digitalization is the trusted exchange of information and data which in itself requires secure identities. It has to be guaranteed that people and devices can securely authenticate against other people, devices as well as applications and systems. In addition, an end-to-end encryption of all electronic communications, avoiding that messages are intercepted or changed between sender and recipient, is a critical component for any company's IT security strategy.

For many years, the proven solution of choice in this area has been digital certificates as part of a PKI (Public Key Infrastructure).

Secardeo offers medium and large companies as well as internationally operating enterprises a trusted service for certificate management and distribution, called the **TOPKI** (Trusted Open PKI) **platform**. Modular design enables companies to leverage individual parts of the platform – or all of its components. In addition, the TOPKI platform is compatible with the Microsoft PKI as well as Open Source and trusted public CAs. Customers benefit as they are able to leverage the CA of their choice.

“As with any human intervention, it is cost intensive and inherently error prone. Our customers are always looking for new ways to further automate their processes in order to reduce the operating cost of a PKI and limit manual work,” explains Dr. Gunnar Jacobson, founder and CEO of Secardeo GmbH. “Our solutions cover the whole certificate lifecycle and importantly for any type of certificate including SSL/TLS, S/MIME, VPN as well as IEEE 802.1x.”

Secardeo – showcasing its expertise at it-sa’s conference program

Dr. Jacobson will compare two techniques used for cryptographic encryption and key distribution - Office 365 OME and the standard mechanism S/MIME – in terms of their security features, usability and management capabilities.

- Presentation in English at the International Forum 10.1 on 9 October at 4pm
- Presentation in German at Forum 9 on 10 October at 11:15am

TOPKI – Customer Success Stories

Regardless of how different the use cases may be – TOPKI has proven its value. Case studies are available from [Drägerwerk](#) as well as a [leading manufacturer of combi steamers and ovens](#).

Meet Secardeo at it-sa
