Press release

SECARDEO certLife v2 for convenient management of certificates from public and private CAs

Nr. 1 / 2022

Ismaning, September 19, 2022 - SECARDEO publishes the second version of "certLife", the web application for the central management of the certificate life cycle.

certLife is used for the role-based central management of any certificates for S/MIME, SSL, VPN etc. in a certificate database and it offers a convenient self-service for users and server administrators using a web browser. Certificates can be generated, renewed, distributed, recovered or revoked on the basis of Windows Certificate Templates. certLife also offers central autoenrollment as an alternative to client-based Windows certificate enrollment. Automated notifications, for example before a certificate expires, as well as statistics on the use of the certificates increase control.

Significant new features of certLife v2 are:

- Direct connection to a large number of CAs such as OpenXPKI, Dog-Tag and managed PKI services such as Digicert, SwissSign, AWS etc.
- Complete certificate management for a Microsoft CA (ADCS)
- Clear dashboard
- Multiple language support
- Delegation of certificates to other users
- Group sharing for joint administration of server certificates
- Import and management of public and private SSH keys
- Extended search for crypto parameters

"With the new version of SECARDEO certLife, large users can efficiently and reliably manage all certificates from a public CA and the company's internal Microsoft CA," says Dr. Gunnar Jacobson, Founder and Managing Director of SECARDEO.

The SECARDEO TOPKI platform also offers a range of supplements to certLife for fully automated certificate lifecycle management.
